for digitalized boxes and chamber ensemble

heather b. frasch (2017)

Flute (Alto and Bass Flute)

Clarinet (Contrabass and Bb Clarinet)

Percussion

Harp

Electronics

Performance Notes:

General

Score is transposed. Bass flute sounds an octave lower than written. Alto flute will sound a perfect fourth below. Bb clarinet will sound a major second lower than written and Bb contrabass clarinet will sound two octaves and a major second lower than written.

Microtones

 One-quarter sharp, one-quarter flat and 3-quarters sharp.
To be played as accurately as possible.

Fermata sections

 = precise duration of fermata. Given example is 40 seconds

 = approximate duration of fermata. Given example is between 30 and 40 seconds.
When no time is given, duration is at the discretion of the performers.

Winds

 = air sounds: no tone, breathy white noise sounds only. Dynamics should be respected accordingly.
Example shows a quarter and a half note.

 = air sound + flutter with tongue. No pitch. When **flz only** is indicated for the flute, no air should be used.

 = *saliva sound*: Flutist should accumulate a bit of saliva in the mouth and gently slurp through tube while inhaling to create a subtle gurgling effect. The character of the sound should not be aggressive or overly animated.

 = *small tongue taps*: On the clarinet the tongue should lightly tap against the reed without an aggressive slap sound. Mouth should be slightly open to produce quiet and wet-like tapping sounds. Finger given note but no extra air or pitch should be added to the sound.
On the flute the tongue should start between the teeth and pull back like the pizz. technique for single sounds. *Tk* should be a fast double tongue effect. In this piece all tapping sounds occur inside the flute. Finger given note but no extra air or pitch should be added to the sound.

 = as many taps as possible in given time frame.

Multiphonics for clarinet are taken from the following website resource: <https://heatherroche.net/2015/09/25/a-selection-of-contrabass-clarinet-multiphonics/>

Multiphonics for flute are found on: <http://www.bassflute.co.uk/06-multiphonics/multiphonics-fingering-chart.html>

Pitches are approximately transposed accordingly. Fingers have come from these resources. If alternations are necessary, the performer should respect the pitches as closely as possible while retaining the character of the phrase.

Amplification: Both winds instruments should be equipped with an amplification system that can be turned on and off during the performance without making extra noise. For the flute only the alto flute needs to be amplified.

Harp

Plectrum: two string instrument bows, 2 guitar picks, fishing wire, two soft timpani mallets, metal tuning key, honey spoon, thick piece of cloth or felt, baking paper, milk foamer, soft bristle brush (paint or make up)
All indicated harp techniques used in this piece can be found at: harpnotation.com

= *bow strings*: strings should be bowed using an string instrument bow. The bow should be inserted horizontally between two strings with the bow hairs facing the string with the written pitch. The bow is drawn over that string to make a sound. It may be necessary to push the string that is not supposed to be played out of the way.

= *slow whistling sounds*: whistling-like sounds created by slowly sliding the palm down the strings in an imprecise location. Hands should move only in a downward fashion. Sounds should be a soft and continuous murmuring sound. Notation indicates right and left hand coordination which can be altered to accommodate comfort of the harpist.

= *use timpani mallets on strings*: tremolo created using two very soft timpani mallets

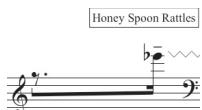

= *milk foamer*: A soft piece of tape or fabric should be attached to foaming circle, acting like the blade of a fan. Then it should hit the strings repeatedly, creating a long sustained note. At m 53: Fan should be used in between tuning and bridge pins very delicately, so barely audible pitches emerge.

= *muted effect*: Palm should mute the strings as firmly as possible to eliminate resonance. Finger tremolo is created by quickly moving other hand rapidly to create a flutter-like effect, (m33) or by using milk foamer to create a more erratic and animated flutter effect (m39). Placement is non-specific.

= *tuning peg*: A metallic tuning peg is held horizontally and pressed against the string. The other hand plucks the string and then the tuning peg is moved slowly down to create a short glissandi sound. Sound should be delicate.

= *honey spoon rattles*: a wooden honey spoon should be placed between the Eb and F strings as notated. (The object must have the right diameter to fit between the strings and not slip down.) It should be pulled gently by the fingers and the rattle should decay naturally after.

= *guitar pic*: use guitar pic to pluck strings instead of fingers. At m. 46, a double guitar pic tremolo between tuning and bridge pins is created with a back and forth motion for a guiro-like sound.

m 64: Strings should be prepared with paper and a thick felt in the given ranges to effect the sound. The material should be threaded between strings in the lower half of the strings. Then strings are played in a regular way. The felt or thick cloth should be woven in such a way that the strings are as muted as possible.

b.d.l.c = bas dans les Cordes

p.d.lt = Près de la table

p.d.ch = Près de chevilles : play in the area between tuning and and bridge pegs. At m45, movement and placement should be ad. lib. while LH fingers move in an erratic flutter motion.

Xyl. = *Xylophonic Sounds*: One hand mutes the string by pressing fingers close to the sounding board. The other hand plays the string normally.

Tuning:

These pitches should be tuned accordingly at the beginning of the piece:

Amplification: Harp should be equipped with an amplification system that can be turned on and off while playing.

Percussion:

Percussionist plays 3 digitalized cigar boxes with objects and electronics. Technical information about the set up for the boxes and electronics is below. The percussionist should keep in mind that discretion about objects inside of the box is an important aspect when playing the piece.

Objects: 2 thin wooden sticks, Half of 1 small clothes attached to a long fishing wire, 2 small wooden pencils, a pinecone that has thin edges so that it can be crinkled, 2 thin but long pieces of wood (15 cm x 7 cm) , 2 small metallic can lids (such as from a can of coffee)

= *transducer rattle*: Box 1 will contain 2 small transducers. The percussionist will need to carefully place the objects on top of the transducers to create a rattle effect. The noteheads are equivalent to a filled and white notehead respectively. So given example shows a quarter and a half note.

= *open/close clef*: Box 3 contains a sensor that measures the opening/closing distance of the boxes. The notation is indicated with the bottom line representing the box being completely closed and the top line when it is completely opened. The middle line and spaces are approximate distances in between. Starting at m 81, positions are precise. They can be found by listening closely to the pitches emerging from transducer.

Trigger clef indicates when the foot pedal should be pushed in order to control the electronics.

Electronics:

Equipment: 3 Digitalized Cigar Boxes, Computer running max/msp, 4 channel speakers, foot pedal trigger, sound card, small amplifier and arduino board.

The 3 Cigar Boxes are digitalized in the following way:

Box 1 = contains 2 small transducers which are connected to a small amplifier and receive outs 5 and 6 from sound card. It also contains 1 small microphone.

Box 2 = contains 1 small microphone

Box 3 = contains a short distance infrared sensor and an electronic rubber string. Needs to be connected to the arduino board

Boxes can be provided by the composer or re-created.

A foot pedal connected to the computer is also needed to control the overall electronics. All processing goes through the computer using max/msp/jitter and sent to 4 Channel speakers.

Transposed Score

for Digitalized Boxes and Chamber Ensemble

heather b. frasch

This musical score page contains six staves for Flute, Bb Contrabass Clarinet, Percussion, Trigger, Harp, and Electronics. The time signature is primarily common time (4/4), with some sections in 6/4. Measure numbers include G.P., "5-7", "40", and "10". The Electronics staff includes instructions for "Soundfile + Sinetones". The Percussion and Trigger staves include specific actions: "opened Box 3 closed", "Open Boxes in an unhurried way", "ad lib. gently shift lid positions without completely closing or opening", and "Close". The Harp staff includes an instruction for "Amplification OFF" followed by a dynamic *p*. The Electronics staff ends with a graphic of a speaker.

d = c. 50
Cloud-like

A

A. Fl. (Alto Flute) and Bb Contrabass Cl. (Bassoon) play sustained notes. A. Fl. has dynamics *ppp* and *p*. Bb Contrabass Cl. has dynamics *n*, *ppp*, and *p*.

Percussion (Perc.) and Trigger play rhythmic patterns. Box 1 (Box 1) is used with "Open" and "Close" actions. A note on Box 1 is marked with "2 very thin sticks" and "place on top of transducer so objects will lightly rattle".

Harp (Hp.) plays "Slow Palm Whistles Downward Motion*" with dynamics *ppp* and *b.d.c.* The Hp. staff also includes "Honey Spoon Rattles" and "Processing on Flute and Sticks".

Electronics (Electronics) is used with "All 4 Speakers + Subs." and "Processing on Flute and Sticks".

Other markings include "Very gentle slurring with inhales" for A. Fl. and "Amplification On INSIDE" for Bb Contrabass Cl. There is also a note about "Sweep Rhythms may be slightly altered in order to accommodate a comfortable hand position".

17

The musical score consists of six staves across seven systems. The top two staves are for Bassoon (B. Fl.) and Double Bassoon (Bb Contrabass Chn). The third staff is for Sounding, which includes Percussion (opened Box 3 closed) and Trigger. The fourth staff is for Horn (Hp.). The bottom staff is for Electronics.

B. Fl. and Bb Contrabass Chn: The first system starts at dynamic 100. Measures 1-4 show sustained notes with dynamics "10", "7", "30~40", and "7". Measures 5-7 show sustained notes with dynamics "10", "25", and "10".

Sounding: The first system starts at dynamic 100. Measures 1-4 show sustained notes with dynamics "100", "503 hz", "10", and "503 hz". Measure 2 contains a box labeled "BOX 1" with instructions: "less motion" with an arrow pointing right, "Stop", and "p Ad lib. Durations Dangle wooden object over lid to create subtle buzz". Measure 5 shows sustained notes with dynamics "503 hz" and "488 hz". Measure 6 shows sustained notes with dynamics "No Movement". Measure 7 shows sustained notes with dynamics "n". The second system starts at dynamic 100. Measures 1-4 show sustained notes with dynamics "100", "Stop", "BOX 3", and "Stop". Measure 5 shows sustained notes with dynamics "n". The third system starts at dynamic 100. Measures 1-4 show sustained notes with dynamics "100", "n", and "n".

Perc. opened Box 3 closed: The first system starts at dynamic 100. Measures 1-4 show sustained notes with dynamics "100", "Stop", "BOX 1", and "Stop". Measure 5 shows sustained notes with dynamics "n". The second system starts at dynamic 100. Measures 1-4 show sustained notes with dynamics "100", "Stop", "BOX 3", and "Stop". Measure 5 shows sustained notes with dynamics "n".

Trigger: The first system starts at dynamic 100. Measures 1-4 show sustained notes with dynamics "100", "Stop", "BOX 1", and "Stop". Measure 5 shows sustained notes with dynamics "n". The second system starts at dynamic 100. Measures 1-4 show sustained notes with dynamics "100", "Stop", "BOX 3", and "Stop". Measure 5 shows sustained notes with dynamics "n".

Horn (Hp.): The first system starts at dynamic 100. Measures 1-4 show sustained notes with dynamics "100", "n", and "n". The second system starts at dynamic 100. Measures 1-4 show sustained notes with dynamics "100", "n", and "n".

Electronics: The first system starts at dynamic 100. Measures 1-4 show sustained notes with dynamics "100", "n", and "n".
